Tejas Gajare

Syracuse University, NY | +1 (315) 418-9936 | gajaretejas@gmail.com | linkedin.com/in/tejasgajare | www.tejasgajare.com

EDUCATION

Syracuse University - College of Engineering & Computer Science, Syracuse, NY — Aug 2021 – May 2023
Master of Science, Computer Science

- Coursework: Natural Language Processing, Data Mining, Cryptography, Blockchain, Design and Analysis of Algorithms, Operating Systems

Savitribai Phule Pune University - Pune, India — May 2015 - May 2019
Bachelor of Engineering, Computer Engineering

- Finalist for ACM International Collegiate Programming Contest (ICPC) Asia Regionals 2019 (Gwalior-Pune)
- Ranked 6th in country for ABU Robocon (India), 2017 - Deployed Motion tracing on Robot to map trajectory of a Frisbee

SKILLS

Languages: Python *(proficient, 5 years)*, C++ *(proficient, 3 years)*, SQL *(proficient, 3 years)*, Java *(intermediate, 2 years),* Go *(intermediate, 1 year)*

Web: HTML *(proficient, 4 years)*, JavaScript *(proficient, 4 years)*, React *(proficient, 3 years)*, VueJS *(intermediate, 2 years)*

Frameworks: Git, Spring Boot, Django, DjangoRest, Flask, Angular, Android SDK, OpenCV, Docker, TensorFlow, Keras

Databases: Microsoft SQL Server, PostgreSQL, Firebase, AWS RDS

EXPERIENCE

Cloud Developer III, *Hewlett Packard Enterprise* – San Jose

- Designed and implemented a Go-based middleware system for enforcing global trade compliance on software downloads affecting over 100K+ devices globally.
- Developed IP-geolocation and account validation workflows using caching (SQLite) to reduce latency and decrease redundant API calls by more than 60%.
- Provided real-time monitoring with PagerDuty and automated Slack alerts to have minimal impact to support processes.

Software Engineer Intern, *Hewlett Packard Enterprise* – Remote
May 2022 – August 2022

- Enhanced customer-facing Go-based REST APIs to meet HPE internal standards, facilitating interoperability across microservices and promoting accelerated user adoption.
- Collaborated with a team of three to modularize the CI/CD pipeline for the HPE Rave platform, reducing build and deployment time to two minutes—a 96% improvement.

Full Stack Developer, *Grouped* – *Syracuse, New York* — January 2022 – April 2022

- Led the development of core microservices and cloud infrastructure of the social media platform at Grouped
- Designed and built a three-tier, multi-AZ infrastructure running Spring boot and Flask microservices on AWS ECS
- Built over 20 API endpoints running on 5 horizontally scaled AWS Fargate instances placed behind Load Balancer
- Collaborated with frontend team to develop modular components and responsive web pages using React.js
- Utilized server-side rendering to decrease the page load time by 35%

Software Engineer, *Yardi* – *Pune, India* — August 2019 - April 2021

- Designed tool for data scrubbing that allowed clients to comply with CCPA & GDPR; improved data scrubber to incorporate complex hierarchical database relationships using T-SQL
- Added feature to list out database fields containing sensitive information reducing field selection time by 50%
- Developed Harbor Management System using ASP.NET and Microsoft SQL Server, facilitated lease tracking via dashboard

Software Engineer Intern, *Persistent Systems* – *Pune, India* — April 2018 - July 2018

- Developed an Android application using Java to calculate physical dimensions of apartments without any external equipment
- Utilized various OpenCV algorithms to detect fixed sized markers in image to calculate perceived dimensions by applying geometric similarity; leveraged optimizations in C++ increasing number of frames per second (FPS) by 80%

PROJECT

A Torch Without Light: Advanced Night Vision - *Publication*

- Built mobile app to capture images in extreme low-light conditions and retrieve high quality image from a CNN implemented using TensorFlow; low-light images were amplified by up to 300 times with Noise Reduction
- Trained model on dataset of 450 RAW images shot in low-light conditions and respective ideal lighting conditions; pre-trained model from reference paper was also utilized
- Integrated OkHttp Multipart Upload Lib with Android's Camera2 API to capture RAW images on mobile and transfer to remote Flask server; average total processing time was under 30 seconds
